Lightwork by Daybreak Labs

The governed AI workforce for regulated enterprises.

The agent platform a bank, insurer, or CPA firm can *actually deploy* — governed on every action, provable, self-hosted, and always improving.

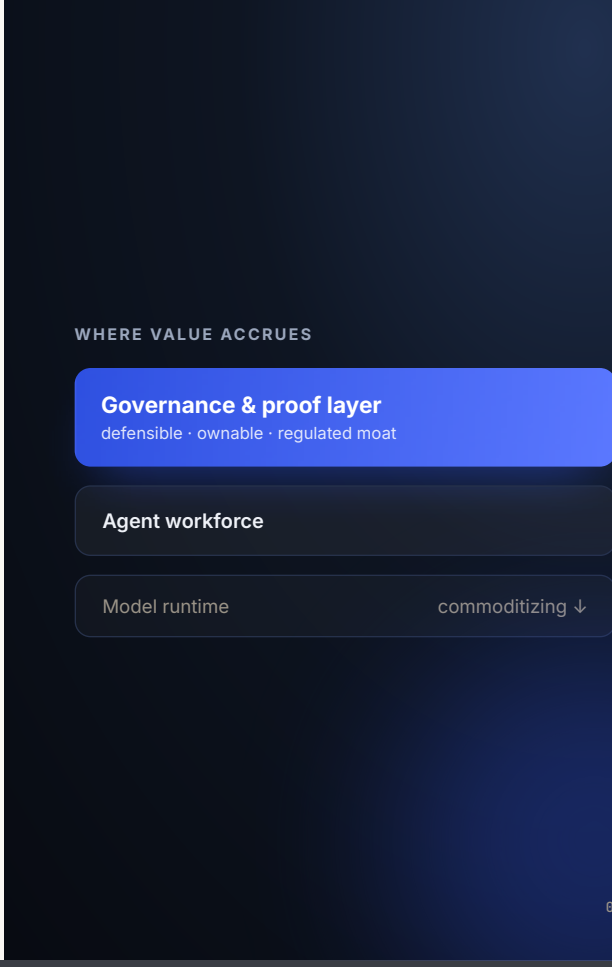

info@daybreakailabs.com · daybreakailabs.com

THE THESIS

The agent runtime is commoditizing. The *governance & proof layer* is the ownable business.

Frontier labs make agents smarter every month — a treadmill. The durable company is built on what wraps the agent: governance on every action, an audit trail that can't be forged, and a workforce that improves under proof. In regulated work, that layer is the whole ballgame — and **no one owns it.**

THE PROBLEM

Every regulated enterprise wants an agent workforce. Almost none can deploy one.

The blocker isn't capability — it's three questions no one can answer. So the pilot dies the moment the CISO, the compliance officer, and the GC walk in.

> **What did it do?**
> No tamper-evident record of the actions an agent took.

> **Could it exfiltrate our data?**
> A hosted black box, or a framework you must secure yourself.

> **Will it get worse?**
> No proof it's improving instead of quietly degrading.

Today's options force a bad trade: **hosted black boxes** you can't run on your data, or **ungoverned frameworks** you have to secure yourself.

WHY NOW

Three forces converging in the next 24 months.

01 **“Ungoverned agent” becomes a non-starter.** EU AI Act, HIPAA, SOX, GLBA — audit & oversight go mandatory. AI regulation is projected to reach most of the world's economies by 2030.

02 **Agents move from pilots to budget** — and stall on exactly the governance gap between “works in a demo” and “cleared our review.”

03 **The model layer races to zero margin.** Raw capability commoditizes; value and defensibility migrate to the governed layer around it.

AI-GOVERNANCE PLATFORMS

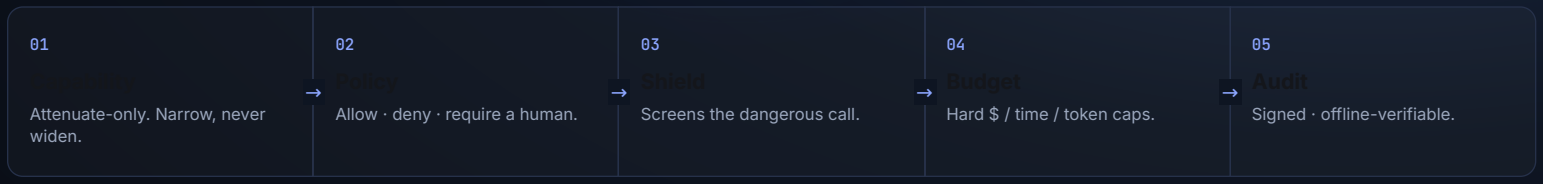

$1B+

projected market by 2030 directional

THE SOLUTION

Not a chatbot. Not a framework. One governed runtime — every action clears one gate.

Self-hosted or air-gapped, on your data — so even a successful prompt injection can't move data out. Then it lands where a human signs off.

TRACTION — THE PRODUCT

Not a concept. Built, installable, and provable today.

2,020

governed specialist packs · 53 suites

14/14

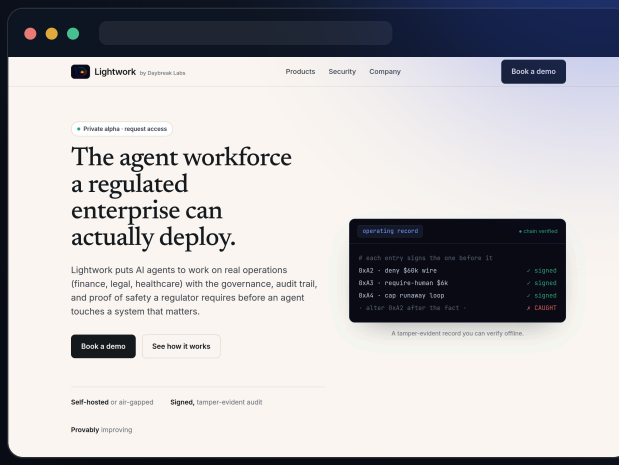

core guarantees proven — signed & reproducible

~310K

lines of code · 8 packages · installable

0

required egress — runs in your boundary

WHY IT'S DEFENSIBLE

Three reinforcing layers. All audited. None a prompt over an API.

Each customer's workforce improves on *their* data, inside *their* boundary — switching cost is the moat, never a data network effect.

01 **Governance on every action**
Attenuate-only capability tokens, a policy engine, an egress lock, and a signed hash-chained audit.

02 **Provable, self-improving learning**
Gets better on its own — every change proven before it ships, reversible in one step. Compounds without drifting.

03 **The 2,020-pack governed library**
53 regulated suites, lint-clean, extended by an agent factory. A hosted incumbent can't air-gap it into a bank.

MARKET

A big market, entered through a sharp wedge.

- **~10,000** US regulated financial institutions in the beachhead.
- **100 customers × ~$250K ACV ≈ $25M ARR** from BFSI alone. validate
- **53 suites already built** for land-and-expand well beyond finance.
- Second wedge: **tax-prep for CPA firms** — a citation-backed docs→1040 pipeline.

Market-sizing figures are directional; re-confirmed before external use.

BUSINESS MODEL

Platform + packs + governance plane. Land, then expand.

REVENUE LINE	WHO BUYS	ANCHOR ACV
Platform — governed runtime + Operating Record	CISO · CIO · Head of Ops	$18K–$500K+
Specialist packs — Finance, Tax, Legal, …	CFO · GC · function owner	$25K–$75K
Fleet Governance — govern agents they didn't build	CISO · platform team	$75K
Custom work — bespoke & regulated deployment	Enterprise / regulated	from $25K

Mid-market land
~$150K
Gold + Finance pack

→

Regulated expand
~$350K
Platinum + Banking + Fleet Gov

Expansion across
53 suites
drives net revenue retention

Recurring, high-margin software; agent count is never a multiplier. Pricing is a directional hypothesis, validated with design partners.

GO-TO-MARKET

Two motions into the same wedge.

motion 1 · direct

BFSI design partners → paid pilot → expand

Founder-led pilots on one governed workflow, in the customer's environment. Win the CISO with provable governance; expand across suites once the first department lands.

design partner → scoped pilot → paid platform → + packs

motion 2 · overlay

“Govern the agents you already have”

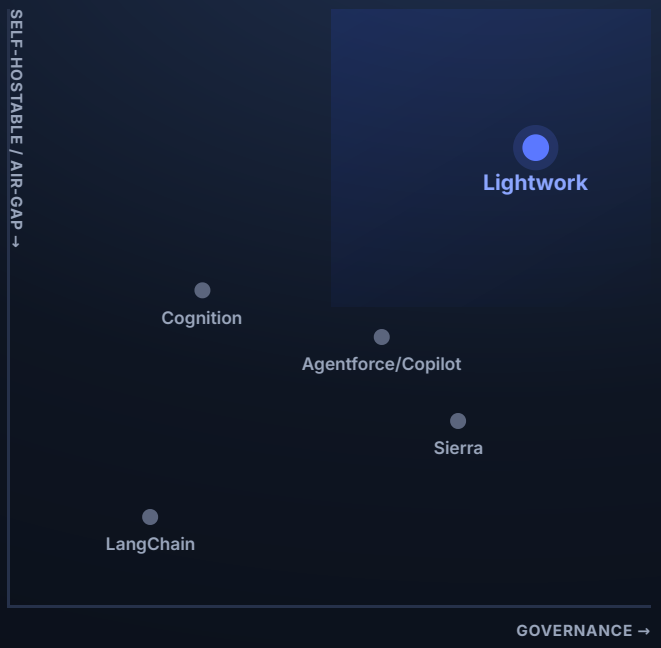

Bring existing Agentforce / Copilot / in-house / open-source agents under Lightwork's governance + memory plane. The easiest way in — and a natural acquisition story for a GRC / ServiceNow buyer.

their agents → Fleet Governance → full platform

COMPETITION

Nobody owns the top-right: governed *and* self-hostable, for regulated work.

- **Sierra** ($15.8B) — hosted CX agents; can't air-gap into a bank.
- **Cognition** — coding agents, not governed enterprise ops.
- **LangChain** — ungoverned plumbing you secure yourself.
- **Agentforce / Copilot** — incumbents with policy, no agent-native self-hostable governed runtime.

TRACTION

A built asset, meeting early pull.

Shipped & provable

Installable today; 2,020 packs; reproducible signed proofs; a pre-answered security questionnaire that de-risks the CISO review before the first call.

Demand

design-partner conversations · LOIs · waitlist

The pull that converts a built asset into a round.

Fill with real numbers: discovery calls booked · LOIs in progress · pilots scoped · inbound. A handful of serious BFSI/CPA conversations is a fundable signal.

TEAM

Why us.

CD

Christopher Day

FOUNDER

background · the unfair insight / access into regulated buyers · why you win this

+

Team & advisors

AROUND YOU

co-founder / key hires / advisors — security, BFSI, or GTM credibility

Founder-market fit is the #1 thing a pre-revenue investor underwrites — make this the sharpest slide in the deck.

THE ASK

Raising $ amount to turn a built asset into revenue.

Use of funds over 12–18 months, mapped to the milestones that set up a fundable Series A.

MILESTONES THE ROUND UNLOCKS
